DETAILED ACTION

Specification

1. The lengthy specification has not been checked to the extent necessary to determine the presence of all possible minor errors. Applicant's cooperation is requested in correcting any errors of which applicant may become aware in the specification.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 1-13 are rejected under 35 U.S.C. 102(b) as being anticipated by Hashino et al (5,914,211).

Hashino et al disclose a lithographic printing plate comprising a substrate, a resin layer, and an image-forming layer. The material comprises a disubstituted amio acrylate resin and a urea resin. These compounds appear to meet the instant claim limitations. The amounts of the compounds of the reference appear to meet the instant claim limitations. After the resin is coated, the material is exposed to form a pattern, and the irradiated portions of the material are ink receptive (column 10, lines 3-38). Given the teachings of the reference, the instant claims are anticipated.
